                                                                                                                                                                                                                                                       The present invention relates to the novel gene LOV1 (LOng Vegetative phase 1) from Arabidopsis thaliana and its use in controlling flowering time in plants. LOV1 inhibits the flowering stimulating gene AGL20. LOV1 can be used for manipulating flowering time by over-expressing LOV1 to delay flowering, or inhibiting expression of LOV1 to stimulate flowering. LOV1 is also useful for identifying homologous genes in other plants. The present sequence is the LOV1 genomic sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240

New LOV1 polynucleotide encoding a polypeptide controlling the flowering time of plants, i.e., either delaying or inducing early flowering of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to Arabidopsis thaliana Long Vegetative phase 1, LOV1, gene (ADX17043), coding sequence (ADX17041) and protein (ADX17042). LOV1 controls the flowering time of plants by repressing the activity of flowering-promoting gene AGL20, and so is useful for controlling flowering: the flowering time of plants can be delayed by LOV1 gene overexpression, or early flowering can be induced by suppressing the expression of the LOV1 gene. The LOV1 gene was isolated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     908
producing transgenic plants with commercially valuable properties, i.e. modified or altered desirable traits as compared to a reference plant, such as an alteration in a plant growth characteristic, e.g. growth rate, germination rate of seeds, vigor of plants and seedlings, or leaf and flower senescence. Sequence information related to the polynucleotides and polypeptides can also be used in bioinformatic search methods. The transgenic plant is useful for growing a progeny plant from a parent plant. This sequence represents one of the cDNAs of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TAACTCTGACGTTACCATTGCTCTAGCCAATCAAAACATATATCGTCCAATGCCTTACGA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a number of isolated cDNA sequences and their encoded proteins which are especially transcription factor related cDNA's and proteins. The isolated or recombinant plant transcription darcor polynucleotides and polypeptides are useful in producing transganic plants with commercially valuable properties, i.e. modified or altered desirable traits as compared to a reference plant, e.g. aslt stress resistance, cosmotic stress resistance, tolerance to freezing, drought, low humidity tolerance, or radiation resistance. Sequence information related to the polynucleotides and polypeptides can also be used in bioinformatic search methods. The transgenic plant is useful for growing a progeny plant from a parent plant. This sequence represents one of the cDNAs of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New plant transcription factor polynucleotides and polypeptides, useful in producing transgenic plants with commercially valuable properties, i.e. modified desirable traits, e.g. salt stress resistance or tolerance
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ACATCATAACCATAACTCATCGACATCATCCCCGTTTAGCCTTAAGACAACAACAACACCA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CATTGTTGACGATCTTCAAAGACTAGTTAACTACCAAATATCAGATGGAGGTAACATCAA 2362
The present invention relates to the novel gene LOV1 (LONG Vegetative phase 1) from Arabidopsis thaliana and its use in controlling flowering time in plants. LOV1 inhibits the flowering stimulating gene AGL20. LOV1 can be used for manipulating flowering time by over-expressing LOV1 to delay flowering, or inhibiting expression of LOV1 to stimulate flowering. LOV1 is also useful for identifying homologous genes in other plants. The present sequence is the LOV1 coding sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           881

                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to Arabidopsie thaliana Long Vegetative phase 1, LOV1, gene (ADX17043), coding sequence (ADX17041) and protein (ADX17042). LOV1 controlls the flowering time of plants by repressing the activity of flowering-promoting gene AGL20, and so is useful for controlling flowering: the flowering time of plants can be delayed by suppression, or early flowering can be induced by suppressing the expression of the LOV1 gene and be induced by flowering the Arabidopsis thaliana by an activation tagging screen.
                                                                                                                                                                                                                                                                                                                                                                            LOV1 polynucleotide encoding a polypeptide controlling the flowering of plants, i.e., either delaying or inducing early flowering of the

and polypeptides. Also disclosed are vectors, expression cassettes, host cells, and plants containing such polymucleotides. Also disclosed are methods for using the polymucleotides and polypeptides to alter the responsiveness of a plant to abiotic stress. The invention is useful in agriculture. The nucleic acid is useful for determining whether a test plant has been exposed to an abiotic stress condition. It is also useful for selecting an agent that alters abiotic stress regulated polymucleotide expression in a plant cell, and to identify a homolog or ortholog to an abiotic stress responsive polymucleotide. The nucleic acid molecule and the polypeptide encoded by it are useful in altering the responsiveness of a plant to an abiotic stress, such as cold stress, salt stress, osmocic stress or any of their combinations. The present sequence is used in the exemplification of the invention
                     polynucleotides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 1212 BP; 245 A; 421 C; 361 G; 185 T; 0 U; 0 Other;

                                                                                                                                                                                      The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to
                                                                     2 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            321 CTTCTACGTCGGCAAGGCGCCCAAGGCGCTTCGCAGCAGCTGGATCATGAACGAGTATCG 380

                                                                                                                                                               Identifying at least one gene involved in plant resistance or response to pathogenic infection for conferring resistance or tolerance to a plant to bacterial, fungal or viral infection by determining or detecting plant
                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying agene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to

variants thereof, that encode transcription factors. Specifically, it refers to transcription factor proteins that are capable of binding to DNA in order to regulate gene transcription and gene expression in a plants, in particular Eucalyptus grandis and Pinus radiata. The present invention describes DNA constructs containing DNA encoding a transcription factor that regulates the promoter, which is operably linked to the desired mucleic acid to be expressed. It further provides transgenic plants expressing a transcription factor that confers a trait to the plant such as increased drought, salt or disease tolerance, height change, enhanced cold, frost tolerance, enhanced cold, frost tolerance, enhanced cold, frost tolerance, enhanced cold, statch as well as improved taste, starch composition, flower longevity and germination, amongst others.

C Accordingly, such plants that are successfully transfected with a DNA construct can be characterized by a difference in flower color, petal or leaf shape and size, aroms or plant height. This polymucleotide is a plant transcription factor cDNA sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          392
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      452

proteins (1) and nucleotide sequences (II) (ADOS1534-ADOS378). The

sequences can be used to produce transgenic plants, which overexpress
(II), where the transgenic plant has an altered trait as compared to a
non-transgenic plant or wild-type plant. The transgenic plant comprises
an altered trait selected from increased tolerance to cold,
increased sermination in cold, increased tolerance to cold,
increased tolerance to ownit cased tolerance to cold,
increased tolerance to ownitions, increased tolerance to
to phosphate conditions, increased tolerance to disease, including
ingl disease and particularly Erysiphe, Rusarium and Botryis,
increased tolerance to ownitiple fungal pathogens, increased tolerance to
tungal disease and particularly Erysiphe, Rusarium and Botryis,
increased tolerance to multiple fungal pathogens, increased resistance to
cupphosate, increased sensitivity to AGA, reduced sensitivity to AGA,
increased sensitivity to AGC, altered sugar sensing, increased resistance to
glyphosate, altered diower structure, loss of flower determinacy reduced
fertility, altered shoot meristem development, altered branching pattern,
contered stem morphology, altered vascular tissue structure, reduced
fertility, altered shoot meristem development, altered branching pattern,
altered trichome structure, altered seed sheaf
copical dominance, altered trichome development, altered shed
germination, slow growth, fast growth, altered cell profileration,
altered cell profileration, altered cell expansion, altered shed
germination, slow growth, fast growth, altered cell differentiation,
content, lethality when overexpressed, altered seed shape, increased base deed only content,
death, lethality when overexpressed, altered seed shape, increased lost growth, altered seed seed organical content, altered seed seed organical content, altered seed seed organical content, altered seed protein content, altered seed protein content, altered seed protein content, alter
Plant; transcription factor; transgenic plant; abiotic stress tolerance; osmocitc stress tolerance; cold trolerance; heat tolerance; low nitrogen tolerance; low phosphate tolerance; fungal disease; glyphosate resistance; flowering; fertility; seed development; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New recombinant polynucleotide encoding transcription factor polypeptides, useful for producing transgenic plants with advantageous properties compared to a reference plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

The sequences can be used to produce transgenic plants, which overexpress (111), where the transgenic plant has an altered trait as compared to a not-transgenic plant or wild-type plant. The transgenic plant comprises an altered trait selected from increased tolerance to abiotic stress, increased tolerance to obiotic stress, increased tolerance to cold, increased tolerance to cold; increased tolerance to increased tolerance to increased tolerance to multiple fungs by phosphate conditions, increased tolerance to multiple fungs by phosphate conditions, increased tolerance to multiple fungs by the cold sensitivity to ABA, reduced sensitivity altered sensitivity altered sensitivity altered sensitivity altered sensitivity altered sensitivity, altered trichome development, altered trichome development, altered cell trichome structure, altered trichome development, altered cell proliferation, altered cell expansion, altered seed development, altered cell proliferation, altered seed seed ripening, altered seed development, altered cell development, altered seed seed tripening, altered seed development, altered seed tripening, altered seed development, altered seed coloration, altered seed seed tripening, altered seed development, altered seed seed tripening, altered seed seed coloration, altered seed seed tripening, altered seed coloration, altered seed seed tripening, altered seed coloration, altered seed seed colorati

The invention describes a recombinant DNA construct comprising a polynucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at the livention are also useful for a consisting of a sequence. The recombinant DNA construct is useful for plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway. For conferring increased resistance to plant disease, for producing galactomannan. Inginin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake cores condition or for modifying seed oil or protein yield and/or content. This sequence represents a plant full length insert
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New recombinant DNA construct, useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for conferring increased resistance to plant disease, or for

Adaint Lecharny, Unkny-Evry Unkny-Evrk-1050, Alain Lecharny, 40-1bp. Upgadiff).

Definition of the terms used to describe the quality of the clone: The about 220 sequences from the clone collection were sorted according to clones and clustered. If more than one contig was formed, the clone was designated 'Contamination'. The contigs and singletcons were blasted against CDS puls pseudogenes from the TIGRYS annotation, and the resulting AGI code is presented if more than 90 percent identity was found. The sequences were also blasted against all TIGRYS introns, and matches longer than 50 bp with 95 percent identity are reported as 'intron found'. The remaining terms for Seganalysis describe the outcome of the evaluation of the CDS detected after palarwise alignment with CDS plus pseudogenes from the TIGRYS introduced as 'intron found'. The remaining terms for Seganalysis describe the outcome of the evaluation of the against all TIGRYS introduce as introduced or contigs for which a full CDS with or without STOP codon was detected, a BLASTP against all TIGRYS protein sequences was performed. Full perfect: 100 percent identity; full good: better than 95 percent identity over less than 95 percent identity over less than 95 percent identity over less than 95 percent of the sequence; weak similarity: less than 95 percent identity over less than 95 percent of the sequence; no similarity: no hit from BLASTP. Note that the collection contains a few clones for which sequencing was the collection contains a few clones of a which sequencing was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /lab host-EE. coil DHSalpha"

//clone_lib="WPIZ-ADIS-06876, coordinator Javier
paz-Area), a set of transcription factor ORFs was
generated. The ORFs were produced in a decentralized way
in the labs of the participants. Most of the ORFs were
generated by RT-PCR using cDNA from various A. thaliana
tissues as a template. Initially, it was planned to use
yeast recombination to move the ORFs from the cloning
yeast recombination to move the ORFs from the cloning
yeast recombination to move the ORFs from the cloning
yeast recombination to move the ORFs from the cloning
yeast recombination to move the ORFs from the cloning
yeast recombination to move the ORFs from the cloning
yeast recombination at the DNA core facility of the
DNA. For end-sequencing at the DNA core facility of the
MPI of Plant Breeding Research (ADIS; head: Bernd
Weisshaar), the plasmids were re-transformed into
DH5alpha, arrayed into 96-well places and new plasmid bwas prepared. Re-transformation proved to be difficult
because a number of clones displayed poor growth. Data
submission has been handled by Gabipp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1883 GIATCAAGICTCTAATCAATGTGCTCATGTATAATTATAGGCTGAAATATCATTGTGCCG 1942

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        An Arabidopsis full-length cDNA library was constructed essentially as reported previously (Seki et al., 1998). cDNA cleaved with BamHI and XhoI was ligated to modified Lambda FLC-1 vector (Carninci et al., submitted for publication) digested with BamHI and SalI. This clone is in a modified pBluescript vector. Please visit our web site (http://www.gsc.riken.go.jp/e/plant/index_e.html) for further
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      24

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                            임
                                                                                                                                                                                             à
than 90 percent identity was found. The sequences were also blasted against all TIGRv5 introns, and matches longer than 50 bp with 95 percent identity are reported as 'intron found'. The remaining terms for Sequnalyais describe the outcome of the evaluation of the CDS detected after pairwise alignment with CDS plus pseudogenes from the TIGRv5 annotation file. The sequences or contigs for which a full CDS with or without STOP codon was detected, a BLASTP against all TIGRv5 protein sequences was performed. Full perfect: 100 percent identity; full good: better than 95 percent identity over less than 95 percent of the sequence; partial good: better than 95 percent identity over less than 95 percent of the sequence; percent identity over less than 95 percent of the sequence; no similarity: no hit from BLASTP. Note that the collection contains a few clones for which sequencing was not successful, which could have simple technical reasons. Obviously, information about these clones is missing in the sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /lab host="E. coli DHSalpha"

/note=sted The ORFS were produced in a decentralized way in the labs of the participants. Most of the ORFS were generated by RT-PCR using cDNA from various A. thaliana tissues as a template. Initially, it was planned to use yeast recombination to move the ORFS from the cloning vectors into target constructs. For this reason, a number of the clones contain 'REGIA tags' (RG_tag1:
/note clones contain 'RGG1 tag1:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         project, the GATEWAY system became available and finally all ORFs were transferred into GATEWAY vectors. At the end of the REGIA project, the clones were collected as plasmid DNA. For end-sequencing at the DNA core facility of the MPI of Plant Breeding Research (ADIS; head: Bernd Weisshaar), the plasmids were re-transformed into DHSalpha, arrayed into 96-well plates and new plasmid DNA was prepared. Re-transformation proved to be difficult because a number of clones displayed poor growth. Data submission has been handled by GabiPP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GTATCAAGTCTCTAATCAATGTGCTCATGTATAATTATAGGCTGAAATATCATTGTGCCG 1942
